ABSTRACT

This 1973 Higher Education General Information Survey (HEGIS) for 1973 covers aggregate changes in total enrollment for fall 1971, 1972, and 1973 by sex of students, attendance status of student, type of program, level of enrollment, institutional control and geographic location at 4-year and 2-year, public and private institutions. Final data indicate at least a temporary reversal of the 4-year trend toward declining rates of enrollment in U.S. colleges and universities. (Author/KE)

NATIONAL CENTER FOR EDUCATION STATISTICS

"The purpose of the Center shall be to collect and disseminate statistics and other data related to education in the United States and in other nations. The Center shall . . . collect, collate, and, from time to time, report full and complete statistics on the conditions of education in the United States; conduct and publish reports on specialized analyses of the meaning and significance of such statistics; . . . and review and report on education activities in foreign countries."--Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e-1).

FOREWORD

In keeping with the policy of seeking a proper balance between valid demands for data by users and the availability and meaningfulness of the data that institutions of higher education are able to provide, the questionnaire employed in the survey of Opening Fall Enrollment in Higher Education, 1973, which was included in the eighth annual Higher Education General Information Survey, was made shorter than that utilized the preceding 4 years. This reduction was accomplished by eliminating separate items for extension students, thus concurrently deleting 4 subtotals from the form. This change in no way affected the subject-matter coverage of the survey.

The continuing cooperation of the registrars and other college and university officials who supplied the basic data is deeply appreciated.

Theodore H. Drews, Acting Director
Division of Survey Planning and Analysis

INTRODUCTION

Final data from the survey of Opening Fall Enrollment in Institutions of Higher Education, 1973, indicate at least a temporary reversal of the 4-year trend toward declining rates of enrollment growth in the Nation's colleges and universities. Whereas enrollment in institutions of higher education for fall 1972 was only 3.0 percent greater than fall 1971 enrollment, the gain for 1973 was 4.3 percent, matching the percentage increase for fall 1971 over fall 1970. 1/

The report on the fall 1972 enrollment survey, Fall Enrollment in Higher Education, 1972, introduced the concept of aggregating the branches of colleges and universities with institutions at the same program level rather than with their parent institutions, which are frequently at a higher program level. 2/ The advantages of this approach are many and obvious; the chief disadvantage is that time-series data are disrupted. For the latter reason, the period of transition from the traditional method of aggregating branches to the new, more practical alternate method will stretch over several years. In this report the treatment of the data aggregated in two ways will be about equal. Again, as in the 1972 report, the computer tabulations of data aggregated in the alternate way will be numbered in the 100's series so that they may be easily distinguished from data tabulations aggregated in the traditional way. Special tables in the text also include, where appropriate, both types of aggregation.

In fall 1973, enrollment in public institutions, as usual, showed a greater increase than that at private institutions (5.0 percent versus 1.9 percent.) With the traditional method of aggregation, public other 4-year institutions showed only a slight gain of 0.2 percent in 1973 following a gain of 3.2 percent in 1972. The other control-level categories reflected the total enrollment trend of greater increase in 1973 than in 1972; the most notable contrast took place in private 2-year institutions, where a 5.9-percent decrease in 1972 was followed by a 5.0-percent increase in 1973. There was very little change in private universities in either year. (See table T-1.)

1/ See Fall Enrollment in Higher Education, 1972, U.S. Government Printing Office, 1974, p.1.

2/ Ibid., appendix A., pp. 729-732; tables A-1 through A-4, pp. 735-738.

When the alternate method of aggregating data of branches is substituted for the traditional method, the net gains or losses of private institutions by level are not much affected, but within the public sector the loss of 4-year branches reduces the enrollment gain of universities to a fraction of a percent and the gain by other 4-year institutions becomes much more substantial. 3/

In keeping with the general trend manifest for more than a decade, in fall 1973 the enrollment of women increased by a greater percentage than the enrollment of men in all control-level categories, when data for branches are aggregated with their parent institutions. (See table T-2.) (By 1973, women accounted for 44.2 percent of total enrollment, compared with 43.3 percent in 1972.) In fact, the enrollment of men declined in two of these categories: public other 4-year institutions and private universities; in the latter category the decline was for the second consecutive year. By far the greatest increase in enrollment for both men and women occurred in public 2-year institutions.

When branch campuses are included with like institutions, the percentage relationships between male and female enrollments do not change significantly, but the net effect overall is that 2-year institutional units gain somewhat in enrollment at the expense of the universities, especially in the public sector.

Part-time students continued to increase at a much greater rate than did full-time, but in fall 1973 the difference moderated somewhat from that of 1972, when the enrollment of full-time students actually decreased by a fraction of a percent. With branch campuses aggregated with their parent institutions, two institutional control-level categories declined in full-time enrollment in fall 1973: public other 4-year institutions and private universities. (See table T-3.)

In private universities, the loss of full-time students was sufficient to offset a gain in part-time students so that the net effect was a slight overall loss in enrollment in fall 1973.

3/ Year-to-year comparisons by type of institution must always be made with caution, because of reclassification of institutions: for example, in 1973 all public 4-year institutions in North Carolina became branches of the University of North Carolina. These institutions (branches) reported combined enrollments of 60,374 for fall 1973.

In only one institutional control-level category--public universities (by the traditional method of aggregation)--did the enrollment increase of full-time students exceed the rate of increase of part-time students; this was in sharp contrast to the relative changes in this category in fall 1972. Both full-time and part-time enrollments increased substantially at public 2-year institutions, but the greatest relative increase for part-time students was at private 2-year institutions (13.2 percent).

When branch campuses are aggregated with other institutions at the same program level, rather than with their parent institutions, public universities show a decline in part-time students from 1972, and private universities now show a decline in both full-time and part-time enrollment. In general, this indicates that branch campuses tend to enroll relatively more part-time students than do the main campuses of universities and other 4-year institutions.

One of the most notable statistics concerning college enrollment in recent years has been the significantly greater relative increase in part-time than in full-time students. Since fall 1966, the first year for which complete data on the attendance status of college students are available, the proportion of total enrollment accounted for by part-time students has increased almost 5 percentage points, most of this increase occurring in the past 2 years. (See table T-4.) Indeed, the enrollment of full-time students actually declined, however slightly, in fall 1972.

During that 7-year period, total enrollment increased 5[illegible]6 percent, full-time students by 40.0 percent, part-time students by 74[illegible] percent, and full-time-equivalent enrollment by 44.4 percent. 4/

The 1.9 percent loss in the enrollment of full-time men in 1972 was reversed in fall 1973 to produce an enrollment gain, however slight, of 0.7 percent. (See table T-5.) However, full-time male enrollments in 1973 still sustained a loss of 1.1 percent in private institutions. This was sufficient to offset a moderate gain in the enrollment of part-time men to produce a decrease in the full-time-equivalent enrollment of men in private institutions. As in 1972, the increase in enrollment of women students in both public and private institutions in fall 1973 was relatively greater than that of men students in all attendance-status categories, although the proportionate differences moderated somewhat from those of the previous year. Part-time women students continued to be the category showing the greatest relative growth, although not to the same extent as in 1972. In public institutions, the growth in enrollment of part-time women in fall 1973 was 11.1 percent and in private institutions, 9.4 percent.

4/ Full-time-equivalent enrollment totals for all years were calculated on the basis of assigning a full-time fractional equivalent of one-third to each part-time student.

The enrollment of students in programs leading to a bachelor's or higher degree increased at a lesser rate than overall enrollment in both public and private institutions in fall 1973; however, both these rates were substantially greater than the comparable increases for fall 1972. (See table T-6.) In 1973 the rate of increase in enrollment in these programs at universities was considerably greater than the rate in 1972, but in other 4-year institutions the 1973 rate of increase was much smaller than it was for the preceding year. These rather low rates of enrollment increase in 4-year institutions were offset by the 7.2-percent increase in 2-year institutions.

The enrollment of male students in bachelor's or higher degree-credit programs recovered from a slight loss in 1972 to post a modest gain in 1973. Enrollment of full-time students in such programs reversed a 1972 decline to show a slight gain in 1973; the rate of growth in the enrollment of part-time students also increased slightly. The rate of increase in undergraduate programs improved slightly in fall 1973 compared with almost no gain at all in 1972, but still remained at less than 1 percent. The rate of decrease for undergraduate men almost leveled off in 1973, while the rate of increase for undergraduate women also declined somewhat.

The rate of increase for men in first-professional programs dropped sharply in 1973, but for women shot upward from an already sizable increase of 25.5 percent in 1972 to a spectacular 40.7 percent in 1973. The overall percentage increase in graduate programs was the same in 1973 as in 1972, but the rate of increase in men improved, while that for women dropped off a bit, although the rate of increase for women was still more than double that for men. Among all students taking work creditable primarily toward bachelor's or higher degrees, those reported as unclassified showed the greatest rate of increase, in both 1972 and 1973; the rates of increase advanced substantially from 1972 to 1973, as well.

Many variables affect enrollments at institutions of higher education, and doubtless there are several that account for the rapid increase in enrollment of unclassified students in recent years. One major cause, certainly, is that many adults--for a wide variety of reasons--are participating in the education explosion by taking courses in the evenings at their nearby community colleges.

The enrollment of students in vocational-technical or terminal-occupational programs not chiefly creditable toward a bachelor's degree but leading to a certificate, diploma, or some other award below the baccalaureate continued to increase in fall 1973 at a rate exceeding three times that for students in programs leading to bachelor's or higher degrees. In 1973, for the first time, total enrollment in the sub-baccalaureate programs exceeded one million. Interestingly, at public institutions, in 1973, the rate of increase of vocational-technical enrollments actually fell off by 2 percentage points; meanwhile, at private institutions such enrollments skyrocketed from a deficit of 4.8 percent in 1972 to a gain of 39.1 percent in 1973. It should be noted, however, that

this increase in absolute numbers amounted to less than 16,000. (See table T-6.) Since enrollment at private institutions constituted only about 5 percent of total vocational enrollment, the tremendous growth in those institutions in 1973 barely offset the loss in growth of 2 percentage points in public institutions, with the net effect that the overall rate of growth for all institutions advanced by only one-tenth of one percent.

As would be expected, the bulk of vocational-technical enrollment is in 2-year institutions (96.8 percent in fall 1973). The rate of increase fell off considerably in universities, from 5.1 percent in 1972 to 1.9 percent in 1973. However, in other 4-year institutions the rate of increase picked up considerably--to 13.3 percent--to approach that of 2-year institutions, which did not quite manage to maintain their rate of growth of fall 1972, but still remained at a high level. (See table T-6.) The rate of increase for men enrolled in vocational programs increased slightly from 1972 to 1973, but even though the rate of increase for women fell by several percentage points the relative enrollment gains for women still remained considerably higher than for men. In 1973, the rate of growth for full-time students in vocational programs was triple the rate of growth in 1972. On the other hand, the rate of growth for part-time students in 1973 was less than half what it was in 1972 and hardly more than half the rate for full-time students in 1973.

The enrollment of first-time freshmen increased by 3.5 percent in 1973, about twice the rate of increase for 1972. (See table T-7.) This rate of increase was less than that for overall enrollment, but was greater than that for undergraduates. First-time students in programs leading to the bachelor's degree increased by 1.0 percent in 1973--following a loss in 1972--but the enrollment of all degree-credit undergraduates increased by only 0.7 percent. In the case of non-bachelor's-degree-credit (vocational-technical) students, first-timers increased at exactly the same rate--14.3 percent--as overall enrollment in these programs. Universities, which lost first-time enrollments in vocational programs in 1972, recovered to register a gain in 1973. Other 4-year institutions, which also showed a loss in first-time enrollment for these programs in 1972, did not quite recover sufficiently to reach the break-even point.

As would be expected, 2-year institutions showed the greatest rate of increase, even though down somewhat from the previous year. The enrollment of male first-time freshmen posted a modest gain, following a loss in 1972, while the rate of increase in female first-time enrollment remained the same for fall 1973 as for fall 1972 -- 5.0 percent. Enrollment of full-time students also registered a gain in fall 1973, following a small loss in 1972. On the other hand, the rate of increase for part-time first-time students dropped by almost half in 1973--from 12.8 percent in 1972 to 6.9 percent in 1973.

Fall 1966 to 1967	+5.5	+4.6	+6.7	+9.2	-3.3

1/ Readers should be reminded that, although enrollment does change every year, so does the number of institutions accounting for this total enrollment. Accordingly, the numbers of institutions in each year for which enrollment data are shown in the table are as follows: 1973 - 2,736; 1972 - 2,680; 1971 - 2,617; 1970 - 2,565; 1969 - 2,536; 1968 - 2,495; 1967 - 2,382; 1966 - 2,337; 1965 - 2,238; 1964 - 2,183; 1963 - 2,140.

2/ A first-time student is defined as a new freshman (in the fall term) who has never previously been enrolled in an institution of higher education. First-time students are included in the appropriate "total, all students" counts. Data for first-time students for years prior to 1966 are not comparable since they include only first-time students in programs chiefly creditable toward a bachelor's degree.
